

ORDERING/FEES

The BAM List can be ordered via the BAM-Webshop:
www.en.webshop.bamliste.de.

The programs are offered at a special reduced fee to users of the previous edition.

Standalone single user application:

– 600 €¹

Update (for users of the previous edition only):

– 200 €¹

Network application (min. 3 licenses):

– 600 €¹ + 200 €¹ x (number of licenses - 1)

Update (for users of previous edition only):

– 200 €¹ x number of licenses

¹ Since the 1st of January 2015 plus 19 % value added tax.

Technical requirements:

Standalone single user application:	
Operating system:	Windows 7, 8, 8.1 or 10
Hard disk:	220 MB free disk space

Network application:	
Server:	220 MB free disk space
Clients:	Server connection needed (LAN, WLAN)
Client operating system:	Windows 7, 8, 8.1 or 10

Sicherheit in Technik und Chemie

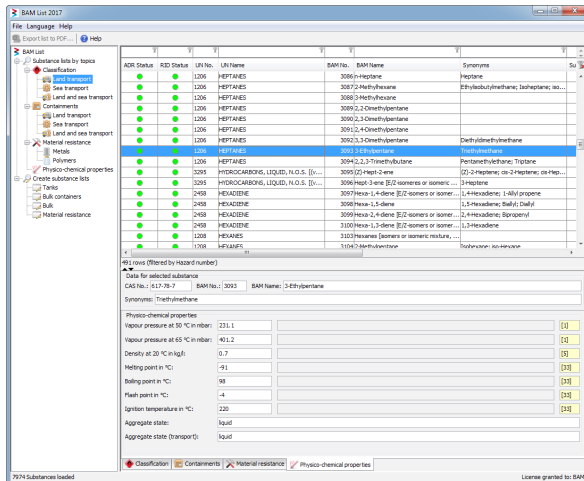

BAM LIST 2017

GENERAL INFORMATION

Since 1989 the BAM List has been the basis for BAM's substance-related prototype approvals for tank-containers and portable tanks for the carriage of dangerous goods. Since 2013 this has been applied also to prototype approvals for demountable tanks and fixed tanks (tank-vehicles). In addition, it is used as a knowledge base for the approval of tank-wagons. Furthermore, it serves as a reference for the material related evaluation of other types of containment systems used for the transport of dangerous goods.

The BAM List 2017 contains all relevant data for the carriage in tanks of approx. 8,000 liquid and solid substances which are subject to the regulations ADR/RID and IMDG Code. It additionally includes compatibility evaluations for gases of class 2.

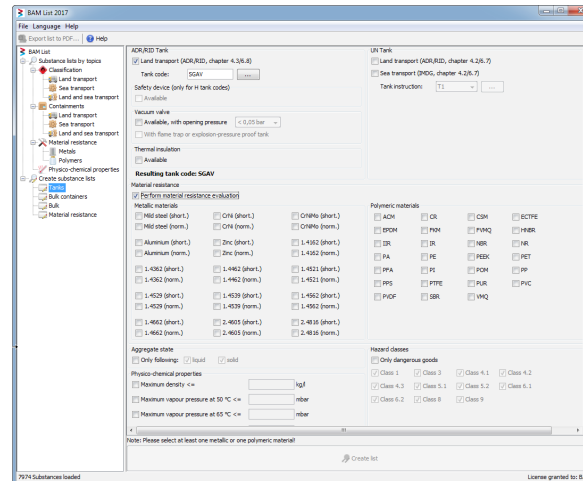

Substance enquiry

FEATURES

The BAM List offers many filter criteria for the substance enquiry, search parameters for creating substance lists and options to sort lists.

- It can be used to determine permitted substances for specified tanks or tank parameters for specified substances for all modes of transport, optionally with evaluation of material compatibility of tank materials. The program checks all user entries for completeness and plausibility in the process.
- The substance lists can be saved as PDF files and also be printed.
- The language of the software can be changed between German and English.

Creation of substance lists

APPLICATIONS

The BAM List exists as a standalone single user and a network application. Demo versions of these programs are available on our website www.en.bamliste.de.

NEW IN THE 14TH EDITION

- Current regulations:
 - ADR/RID 2017;
 - IMDG Code (Amendment 38-16);
- 160 new substance entries;
- Updated material resistance data;
- New tank material: nickel based alloy 2.4816 (alloy 600);
- Possibility to filter the substance lists by flash point;
- Explanation of the codes of the conditions of a material resistance evaluation in the pdf-file.
